PATENT APPLICATION

IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

In re application of

Docket No: A7842 ✓

Michael T. ROSSI

Appln. No.: 09/755,081 ✓

Group Art Unit: 2874

Confirmation No.: 5137 ✓

Examiner: Scott A. Knauss

Filed: January 08, 2001 ✓

RECEIVED
MAR 13 2003
TECHNOLOGICAL CENTER 2800

For: APPARATUS AND METHOD FOR ON-LINE BINDER LAYLENGTH
MEASUREMENT AND ADJUSTMENT

AMENDMENT UNDER 37 C.F.R. § 1.111

Commissioner for Patents
Washington, D.C. 20231

Sir:

In response to the Office Action dated December 13, 2002, please amend the above-identified application as follows:

IN THE SPECIFICATION:

Please amend the Specification as shown below:

On page 3, please replace the paragraph continuing from page 2, with the following:

Manufacturing fiber optic cables has increasingly developed into an automated process. Measuring the length of the binder material necessary for a particular cable design, however, is still a manual process. Traditionally, the binder is manually measured using a ruler or a tape measure. The binder laylength is then calculated by measuring the distance from a first peak on the bound core to a second peak on the bound core, or from one binder center to the next binder center. Manually measuring the binder laylength is therefore a trial and error process. Often,
